WIND REPORT | 01/01/2019 - 08/22/2026

Prepared For: 9100 N. Central Expressway #123, Dallas Texas 7523175231
32.872550, -96.768973

This Wind Impact Report is an automated product meant to be an informational tool to help determine when wind speeds greater than or equal to 39 Miles Per Hour occurred at the location of interest. This report is based on an algorithm and ingests model data, surface observations, and storm reports. The automated report chronologically displays the dates when strong winds were detected at the property and provides an estimated maximum wind speed. The wind speed values utilize weather data and information that was available at the time it was generated. Updates to the weather records or NOAA reports could materially affect the output in the report at a later date. It is recommended that automated reports be ordered after 8:00 a.m. EST if you'd like to have the data for the previous day considered in the search.
